

Class 05 - R graphs

Xuqian Tan

Jan 22, 2019

```
# Class 05 R graph intro
```

This is some test and I can have **bold** and *Italic* and code

```
# My first project
```

```
x <- rnorm(1000,0)
```

```
boxplot( x )
```

```
summary(x)
```

```
##      Min.   1st Qu.   Median     Mean   3rd Qu.     Max.   \n## -3.68230 -0.72595 -0.03200 -0.04653  0.65293  3.58431
```

```
hist(x)
```

I have generate x and it has 1000

```
boxplot(x, horizontal = TRUE)
```

```
plot( 1:5, pch=1:5, cex=1:5 )
```

```
barplot(VADeaths, beside = TRUE)
```

```
barplot(VADeaths, beside = FALSE)
```

Hands on session 2

2A

```
weight_age <- read.table("bimm143_05_rstats/weight_chart.txt", header = TRUE)
plot(weight_age, typ = "b", pch=15, cex=1.5, lwd=2, ylim=c(2,10), xlab="Age (months)", ylab="Weight (kg)")
```

Baby weight with age

2B

```
GRCm38 <- read.table("bimm143_05_rstats/feature_counts.txt", header = TRUE, sep = "\t")
par(mar=c(3.1, 11.1, 4.1, 2))
barplot(GRCm38$Count, horiz = TRUE, names.arg = GRCm38$Feature, las = 1, main = "Number of features in ")
```

Number of features in the mouse GRCm38 genome

```
# 2C
par(mar=c(3.1, 5, 4, 2))
hist(c(rnorm(10000), rnorm(10000)+4), breaks = 20)
```

Histogram of $c(\text{rnorm}(10000), \text{rnorm}(10000) + 4)$

```
# 3A
par(mar=c(6, 5, 4, 2))
```

```
male_female <- read.table("bimm143_05_rstats/male_female_counts.txt", header = TRUE, sep = "\t")
barplot(male_female$Count, horiz = FALSE, col=rainbow(nrow(male_female)), names.arg = male_female$Sample)
```

```
# 3B
genes <- read.table("bimm143_05_rstats/up_down_expression.txt", header = TRUE)
nrow(genes)
```

```
## [1] 5196
```

```
table(genes$State)
```

```
##
##      down  unchanging      up
##       72      4997      127
```

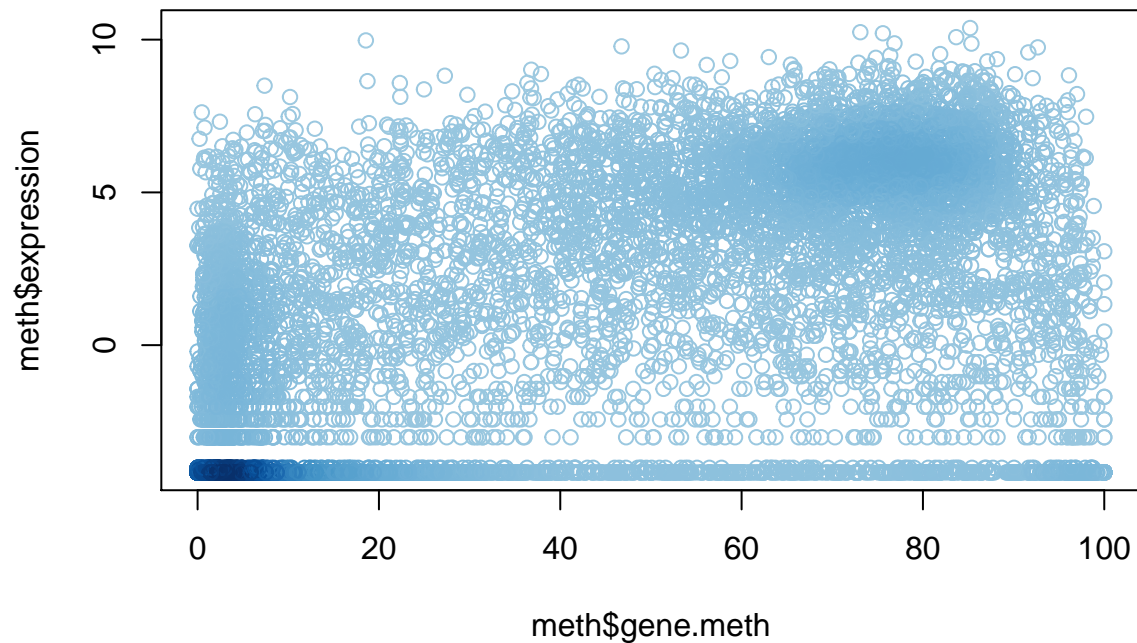

```
palette(c("blue", "gray", "red"))
plot(genes$Condition1, genes$Condition2, col=genes$State, xlab = "genes condition 1", ylab = "genes condition 2")
```

```
#3C
meth <- read.table("bimm143_05_rstats/expression_methylation.txt", header = TRUE)
nrow(meth)
```

```
## [1] 9241
```

```
dcol <- densCols(meth$gene.meth, meth$expression)
plot(meth$gene.meth, meth$expression, col = dcol)
```

```
inds <- meth$expression > 0
dcol <- densCols(meth$gene.meth[inds], meth$expression[inds], colramp = colorRampPalette(c("blue", "green"))
plot(meth$gene.meth[inds], meth$expression[inds], col = dcol, pch = 20)
```
